(b) (7)(C), (b) (6) is a former employee of Dupont and has known about this leak since it's beginning in 2011... The Ascension police came out when called by (b) (7)(C), (b) (6) to investigate this leak this past Sunday, 10/27/2013... Upon investigation, Dupont claimed they would repair the leak and did not do so... Release has been ongoing for over 2 years coming from a converter, a hold interpass exchanger, and the hot interpass exchanger... These are the 3 vessels that the release is coming from, and possibly more... After Sunday, they added plastic vac hoses they tried to use to vac the leaks up instead of repairing them, and they are still not working efficiently... The hoses were up much of the time from December 2011, and were failing on a regular basis... About a week ago, the system was shut down for a month to try to repair one leak, and was they brought back online, but there are more leaks that are releasing gas... There have been employees who have been exposed to the gas, including one who had to go to the doctor for symptoms around May 2012... Other contractors and individuals have been exposed to the release and called an EMT to the site for investigation... (b) (7)(C), (b) (6) has video of the ongoing release, along with many witnesses who have seen it... (b) (7)(C), (b) (6) is requesting an investigation into this matter, as it is dangerous, since there is no monitoring or calculation of how much is being released...
